Logic-serve CI/CD details :

CI/CD pipeline implementation for CampaignHero. The code is deployed on GitHub.
Requirement: Automation pipeline for Continuous integration and Continuous Deployment. The application is live and implement directly on the production servers after performing POC and testing and evaluating performance of the application. This will be an In-Place pipeline integrating AWS CI/CD and GitHub. All the artifacts will be stored in the S3 bucket which will have required access IAM role attached to access and store details of the deployment. Deployment will be on EC2 instances and those instances are backed by an Autoscaling group and Elastic Load balancer and other monitoring tools to monitor and regulate application performance.
